

<https://github.com/ndsev/zswag>

for this repository, the generated uml diagram is not related at all to the ground truth diagram in the repository. The analysis given by the llm is pretty accurate. It first analysed each image then compared both. All the points it gave are correct.

<https://github.com/OpenPSD/modelbank>

even the same situation with this diagram as well. It is only able to display the structure of repository. It is unable to get any details about the repository.

<https://github.com/batatero/arquiteturaPHP00>

the llm was unable to generate this diagram.

<https://github.com/EOS-Nation/dfuse-docs>

the generated images is only representing the documents in github. It has no trace of internal Architecture and technical details. LLM analysed it correctly.

<https://github.com/ballerina-platform/asynccapi-tools>

it is unable to cover internal details of the project. It just shows just the hierarchy of files. However it is better. The analysis is correct.
